SUMMARY

Software developer building full-stack and backend systems in Python and JavaScript/TypeScript to solve operational problems observed firsthand, including certificate automation, examination integrity, and academic result processing.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript

Frameworks & Libraries: Next.js, FastAPI, Flask, OpenCV

Databases: PostgreSQL, MySQL

Tools & Platforms: Git, Vercel, Google Workspace Admin

PROJECTS

MailMyCertificate | *Next.js, FastAPI, Google OAuth* Oct 2025 – Present

- Developed a certificate automation platform to completely eliminate manual certificate generation and distribution overhead.
- Built a dynamic template editor featuring coordinate-based field mapping for highly customizable certificate layouts.
- Automated bulk certificate generation and secure email delivery using CSV import, server-side PDF generation, and Gmail OAuth.
- Implemented a local-first architecture with IndexedDB for highly responsive, offline-capable client-side data management.

SafeExam.in | *Next.js, FastAPI, PostgreSQL* Feb 2026 – Present

- Developing a browser-based examination platform supporting MCQ assessments for institutional use.
- Implemented browser activity monitoring to detect tab switching and window focus loss during exams.
- Built an asynchronous auto-save system to persist answers during unstable network conditions, reducing risk of answer loss.

Rzult | *Python* Jan 2024 – Feb 2024

- Developed an automated university result processing system to retrieve and organize university results, eliminating repetitive manual workflows.
- Implemented OCR-based CAPTCHA recognition using OpenCV and ONNX Runtime to automate result retrieval from the university portal.
- Engineered a multithreaded processing pipeline that retrieved and processed 300+ student results concurrently, reducing result collection from hours to seconds.

Calcuzy.app | *Next.js, TypeScript, Tailwind CSS* Jan 2026 – Present

- Built a browser-based utility platform offering approximately 37 lightweight, client-side tools requiring no login.
- Implemented structured JSON-LD metadata across tool pages to improve search indexing and organic discoverability.
- Optimized tools to run entirely client-side, minimizing server dependency and load time.

EXPERIENCE

Freelance Full-Stack Developer Dec 2025 – Present
Priya Sarv Utthan Seva Sansthan (NGO) Indore, India (Remote)

- Built and deployed an end-to-end production website for a client organization, including public-facing pages and administrative functionality.
- Implemented a donation workflow with Razorpay payment gateway integration for secure online contributions.
- Built a volunteer onboarding workflow with form-based registration and data collection.
- Maintain the site in production with continuous deployment and updates.

Field Support Engineer (Digital Infrastructure) Mar 2026 – Apr 2026
Brio Interactive Technologies Ltd. (Client: EMRS Govt. School) Indore, India

- Set up Google Workspace for Education environments, including domain verification and DNS configuration.
- Provisioned user accounts and access controls for institutional deployment.
- Onboarded smart panel hardware and trained 30+ teaching staff on classroom technology adoption.
- Resolved on-site hardware-software integration issues to minimize deployment downtime.

Technical Head Sept 2025 – Present
GFG Student Chapter, Chameli Devi Group of Institutions (CDGI) Indore, India

- Lead technical coordination for workshops, hackathons, and coding events conducted by the GFG Student Chapter.
- Support delivery of workshops on system design, Git workflows, and deployment practices.
- Handle event operations including registration, technical coordination, and participant guidance.

EDUCATION

Chameli Devi Group of Institutions (CDGI) <i>Bachelor of Technology in Computer Science Engineering (RGPV) CGPA: 7.68/10.0 (current)</i>	2023 – 2027 Indore, India
St. Arnold School <i>Class 12 (CBSE), Science Stream</i>	Graduated 2023 Indore, India

ACHIEVEMENTS & CERTIFICATIONS

Google Student Ambassador Selected to represent Google developer technologies, organize technical initiatives, and support student developer communities.	2026 – Present
Research Presenter – ICSEE 2024, MANIT Bhopal Presented a research paper on AI-assisted sustainable energy optimization systems at the International Conference on Sustainable Energy Engineering.	Feb 2024
Hackwave 36-Hour National Hackathon Collaborated with Team Tech Titans 2 to design and develop a working software solution during a national-level hackathon.	Apr 2024
AWS Solutions Architecture Job Simulation (Forage) Completed practical cloud architecture simulations involving scalable infrastructure design and AWS service selection.	Jan 2026
IIT Bombay Spoken Tutorial Project Earned certifications in Python Programming and Git Version Control through invigilated examinations (Score: 90%).	2024 – 2025
Google Developer Student Clubs (GDSC) Completed the Generative AI Study Jams program covering modern AI concepts and application development.	2025
Microsoft Power BI Training Completed technical training in data visualization, DAX, and interactive dashboard development.	2025

LEADERSHIP & ADDITIONAL INFORMATION

Leadership: Technical Head, GFG Student Chapter (CDGI); Organizing Volunteer, Shrikunj E-Summit; Technical Event Coordinator, Citronics Robosoccer.
Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Software Engineering.
Languages: English, Hindi
